RESPONSE TO APPLICANT'S AMENDMENT

1. Applicant's amendment, filed 04/28/05 is acknowledged.

Claims 1-16 and 18-21 and 24 are pending.

Claims 4,6-8 and 21 stand withdrawn from further consideration by the Examiner, 37 C.F.R. § 1.142(b) as being drawn to a nonelected invention.

In view of the amendment, filed 04.28.05 the following rejection remains:

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-3,5,9-16, 18-20 and 24 are rejected under 35 U.S.C. 102(a) as being anticipated by WO9915629 for the same reasons set forth in the previous Office Action, mailed on 01/25/05.

Applicant's arguments, filed 04/28/05 have been fully considered, but have not been found convincing.

Applicant asserts that WO'629 does not teach the use of bFGF for in vitro cultures but only teaches the use of bFGF for in vivo use.

Contrary to Applicant's assertion it is the Examiner position that WO' 629 teaches a method for *in vitro* culture of hematopoietic progenitor cells to produce differentiated cells of non-hematopoietic lineage (see entire document, Abstract in particular).

WO'629 teaches that said cells are cultured under condition that promote differentiation, using three dimensional porous matrix having a unitary microstructure having a percent of open space of at least 75% and having a diameter of pores at mid-point on average of less that 150 µm (see page 5 lines 12 in particular). WO'629 teaches that porous solid matrix is a metal-coated wherein a metal is tantalum (see page 5, lines 10-25 in particular).). WO' 629 teaches porous solid matrix having seeded hematopoietic progenitor cells wherein said cells is impregnated with a gelatinous agent that occupies pores of the matrix (see pages 8-9 in particular). WO' 629 teaches that hematopoietic progenitor cells are obtained from blood product wherein blood product is unfractionated bone marrow (see pages 5 and 26 in particular). WO' 629 teaches that hematopoietic progenitor cells areCd34+ or CD34 or can be isolated from nonnucleated cells or

Application/Control Number: 10/088,826

Art Unit: 1644

enriched for cells having a common marker (see examples 1-4 in particular). WO' 629 teaches that hematopoietic progenitor cells are cultures in the presence of various growth factor that promote differentiation such as bFGF (see pages 6 and 12 in particular). It is noted that WO' 629 teaches does not explicitly disclosed that under recited conditions hematopoietic progenitor cells would produce neuronal cells. However, the recited conditions, i.e. culturing hematopoietic progenitor cells in the environment comprising bFGF is the same condition as claimed (see instant claim 5 in particular). Thus a method taught by WO' 629 would inherently result in producing neuronal cells. Under the principles of inherency, if a prior art method, in its normal and usual operation, would necessarily perform the method claimed, then the method claimed will be considered to be anticipated by the prior art. When the prior art method is the same as a method described in the specification, i.e. culturing hematopoietic progenitor cells in an environment comprising three dimensional porous matrix and comprising growth factor bFGF, it can be assumed the method will inherently perform the claimed process, i.e produce neuronal cells. See MPEP 2112.02. Also, see Bristol-Myers Squibb Co. v. Ben Venue Laboratories, Inc. 58 USPQ2d 1508 (CA FC 2001); Ex parte Novitski 26 USPQ 1389 (BPAI 1993); Mehl/Biophile International Corp. V. Milgraum, 52 USPQ2d 1303 (Fed. Cir. 1999); Atlas Powder Co. V. IRECO, 51 USPQ2d 1943 (Fed. Cir. 1999)

The reference teaching anticipates the claimed invention.

- 4. No claim is allowed.
- 5. THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Art Unit: 1644

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michail Belyavskyi whose telephone number is 571/272-0840 The examiner can normally be reached Monday through Friday from 9:00 AM to 5:30 PM. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on 571/272-0841.

The fax number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
